Growing Younger

We ask our patients two questions – the first seems like it has an obvious answer, but the second question makes most reconsider what they know about the anti-aging industry:

- 1). Do you want to live longer? Because it's more possible now than ever, thanks to rapidly advancing technology...
- 2). If you're going to live longer, are you interested in living better? Years for the sake of years? Or life in those years?

When people come to us with symptoms, we work with them on the primary need then help them find the cause working to reverse negative effects.

Reversing effects sounds like science fiction but it's the future of medicine according to pioneers like molecular biologist David Sinclair who is making "old mice grow young" in his Harvard Medical School lab. Referencing the "Benjamin Button Effect," a recent article by CNNhealth says, "antibiotics, sterilization, and vaccines ushered in a new age of health and longevity, now new technologies including **robotics, AI, and data will continue to extend our lifespans.**"

The integrated medical solutions at the Fraum Center for Restorative Health come from a **proactive health perspective** that helps "compound interest on your health." As people get older, they try to catch up in their later years with extra health care. We flip the script and lessen negative experiences. These include the deterioration of your body's systems and processes, the pain and disruption you encounter, and the amount of time you spend at the doctor's office or in the hospital.

Aging doesn't have to age you – at least not in the way we've come to believe. Your cells' innate intelligence and their response to Fraum's restorative processes can slow, extend, and in some cases reverse the burdens your body carries.

Imagine becoming increasingly, uncommonly, restoratively, well.

Live the life you love,

Dr. Brad E. Fraum D.C.

UPCOMING BEYOND STEM CELLSTM SEMINAR DATES

MON OCT 3RD 6PM
TUES OCT 11TH NOON
MON OCT 17TH 6PM
TUES OCT 25TH NOON
